

Anatomy of a Figure

Three Top-level Components

Pylab

Collection of command style functions that make matplotlib work like MATLAB

Frontend

Set of classes that abstract actual plotting mechanics and details using a high-level user API

Backend

Renderers, that transform the frontend representation to hardcopy or a display device

Hierarchy

Figure is a top-level container

PyPlot APIs operate at higher levels

Matplotlib APIs at lower levels

Matplotlib Object Hierarchy

Overall window or page, within which all operation are performed

Matplotlib Object Hierarchy

Area within a figure actual graphs are plotted

Matplotlib Object Hierarchy

Axes has an X-Axis and a Y-Axis

Matplotlib Object Hierarchy

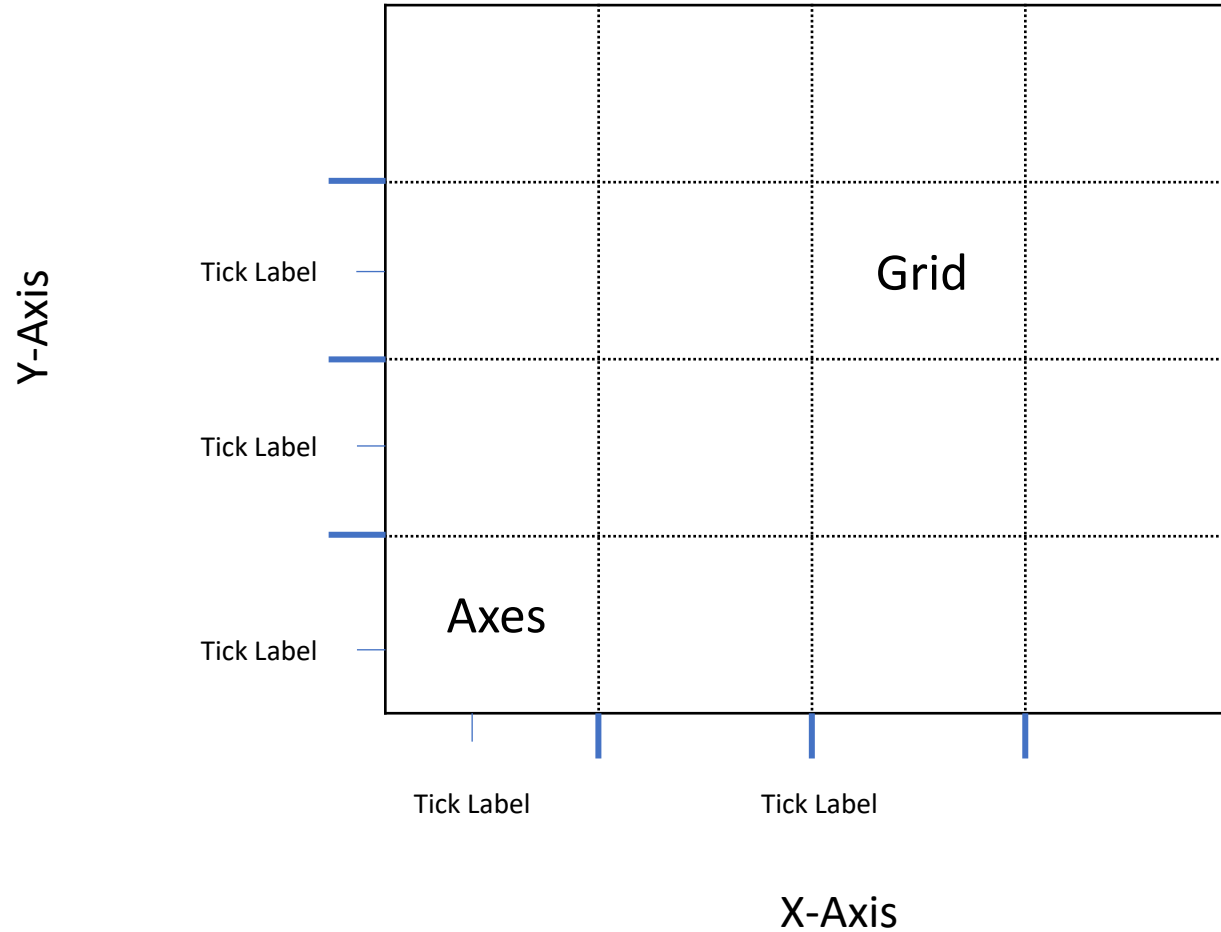

Contains ticks, tick locations, labels

Matplotlib Object Hierarchy

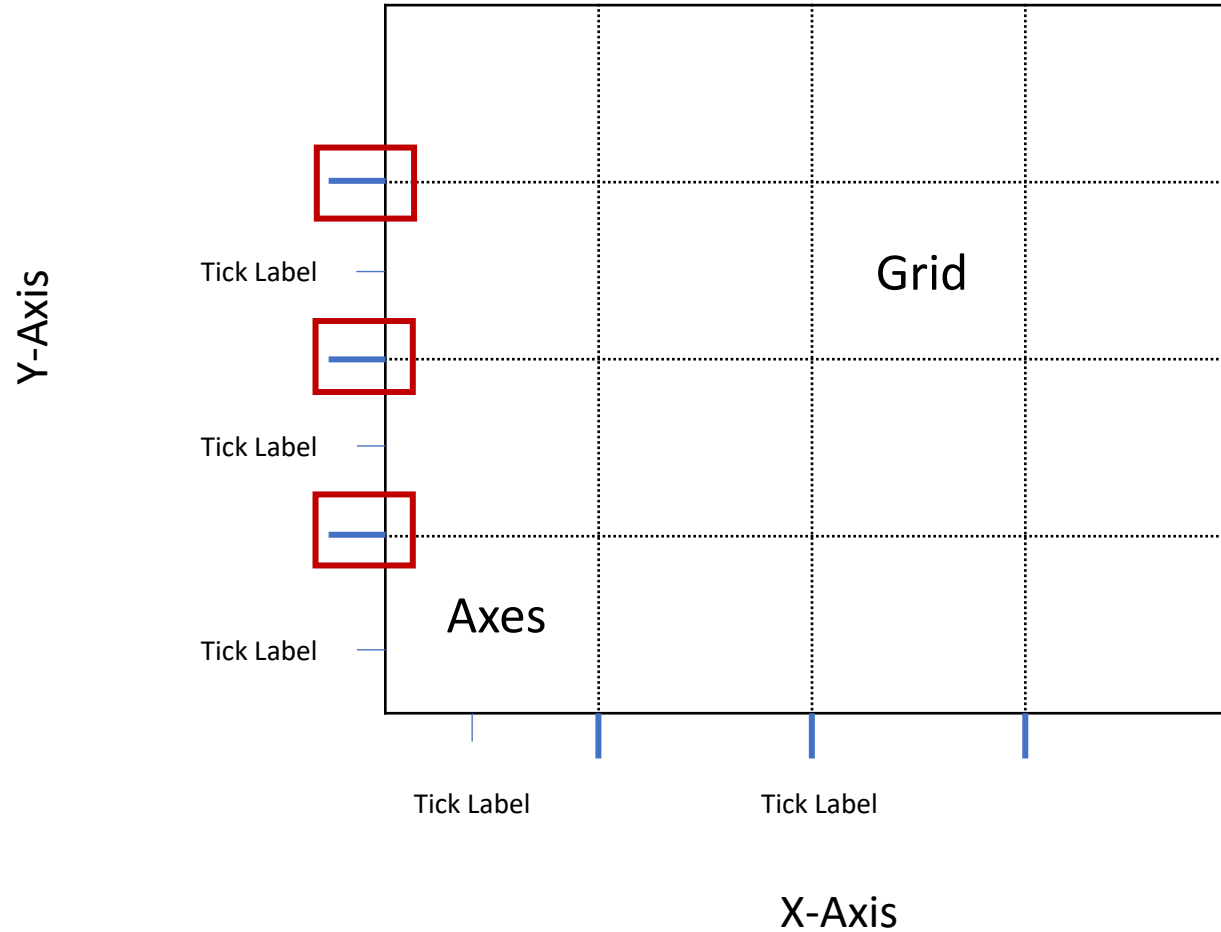

A figure can have more than one axes
